## Deckstone Porcelain Panels

### Clean & Care

Porcelain Panels are exceptionally resistant to staining and in most cases just need to be washed with a neutral detergent diluted with water. For more stubborn stains additional effort may be required.

Avoid using abrasive products such as scouring pads, steel wool pads, or products consisting of strong acids or alkalis.

If difficult stains or dirt occurs use a mild alkaline detergent, rinsing well with water after cleaning.

To avoid stains or abrasive material Deckstone Porcelain Panels should be regularly swept.

For tougher stains that cannot be removed with simple water/detergent we recommend using specialized cleaning products such as Fila Cleaner FilaPS87 ([www.filasolutions.com/us/store-locator.html](http://www.filasolutions.com/us/store-locator.html) )

For rust stains Fila also has a more intense acid based cleaning product called Deterred which contains high concentrations of surfactants.

#### **Note**

The above recommendations are the result of research and experience. The suggest cleaning performance of materials can vary depending on the location and the conditions of the installation. Coverdeck Systems will not be liable for any damage arising from incorrect installation, improper. Cleaning and maintenance procedures, or incorrect choice of materials for the intended use.
