Ipe Wood Deck Tiles Clean & Care

A good sweep and any standard cleaner can be used to clean ourr without harming the plastic. Pressure washing is also a good idea from time to time to remove built-up dirt and debris. When using a pressure washer, do not exceed 1800psi with a 20-degree nozzle.

Ipe wood does not require a sealer coat as its natural density prevents water absorption. Deck treatments may be desired, we recommend using Penofin Oil (www.penofin.com) if you wish to maintain the rich deep color of the wood

Ipe wood will age a silver patina if left untreated.
